Your final submission should include all of the following components:

1. Final Revised Scientific Report including tracked changes (10–12 pages, including all sections).
2. Human/Peer Feedback Summary (Part 1).
3. Completed Prompting Log (Part 2; documented prompts and outputs).
4. Reflection (Part 3; ~600 words).
5. Appendix: Provide screenshots or transcripts of your AI interactions.

To assist in completing the assignment a Pro Forma is provided below which will guide you through the revision of your manuscript and provide places in which you can write your answers and reflections.

Your responses in the below Pro Forma should be:

- In Times New Roman font
- Be single lined spaced
- Be in dot points when it is requested (i.e. part 1 & 2)
- Should not exceed the word limits outlined for each section.

BIOL341/982: Assessment 4 Pro Forma:

Student Name:

PART 1: PEER FEEDBACK SUMMARY AND REVISION PROCESS

Human/Peer Feedback Summary

Instructions: Using dot points summarise the feedback you received from your peers. Be specific about what aspects of your report were highlighted for improvement.

- **Key points of feedback:**
  (e.g., "Introduction lacks a clear hypothesis," "Results section needs more concise descriptions of figures.")

- **How you plan to address this feedback in your revisions:**
  (e.g., "Reorganize the introduction to clearly state the hypothesis," "Reword figure descriptions to be more concise.")

PART 2: REVISING YOUR REPORT USING AI

Instructions: Experiment with the following three levels of prompts while revising your report. It is important that you document your prompts, AI outputs, and how you applied the feedback as this information will need to be included in your final submission and will be marked.

Use the below prompting log to improve sections of your report that you identified from your feedback as needing work. Keep note of what you are doing using dot points in the boxes provided.

2.0. Contextualise the model

It is important to tell the generative AI model what you want it to respond in the context of. I.e. if you say that it is a high school student it will give you simpler responses than if you tell it to be a university professor. This contextualisation can have a huge influence on your outputs.

- **Prompt used:**
  (e.g., "You are an expert in scientific writing and an editor of a top ranked journal")

2.1. "Do for me" Prompt

- **Prompt used:**
  (e.g., "Rewrite my XXX section to make it clearer.")

- **AI Output:**
  (Paste the relevant output here)

- **How you incorporated the AI's response into your report:**
  (Explain how this output improved or altered your writing)

2.2: "Evaluate" Prompt

- **Prompt used:**
  (e.g., "Evaluate the clarity of XXX. Suggest specific improvements.")

- **AI Output:**
  (Paste the relevant output here)

- **How you incorporated the AI's feedback into your report:**
  (Explain how this feedback influenced your revisions)

2.3: "Teach me" Prompt

- **Prompt used:**
  (e.g., "Teach me how to improve XXX section by making it more concise.")

- **AI Output:**
  (Paste the relevant output here)

- **What you learned from this interaction and how you applied it:**
  (Explain how this guidance helped you understand scientific writing better)

PART 3: REFLECTION

Instructions: On the following page write a **~600-word reflection** addressing the following questions:

3.1: Comparison of Feedback: How did the quality of feedback from AI compare to that of human feedback? (Max 150 words)

3.2: Effectiveness of Prompting Levels: Which level of prompting ("do for me," "evaluate," or "teach me") was most effective for improving your report? Why? (Max 150 words)

3.3: Impact on Your Writing Approach: Did using AI alter how you approach scientific writing or revision? How? (Max 150 words)

3.4: Limitations and Advantages of AI Tools, ethical AI use: What are the limitations and advantages of using AI tools for scientific writing? What would constitute inappropriate use of AI in this task? Why? (Max 150 words)

APPENDIX

Please screenshots or transcripts of your AI interactions below. You must include at least one conversation transcript/screen shot.

BIOL341/982: Assessment 4 Marking Guideline

BIOL341/982: Assessment 5 – Detailed Marking Rubric

Total: 15 marks

Final Report with Tracked Changes (3 marks)

Criteria	**3 marks**	**2 marks**	**Satisfactory (1) / Needs Improvement (0)**
Evidence of high-quality revision	Extensive and thoughtful revisions throughout; tracked changes clearly demonstrate improved clarity, logic, and scientific style	Moderate revisions that address key issues; tracked changes show targeted improvements	Minimal or no revisions; changes are superficial or not tracked
Clarity and quality of improved writing	Final report is clear, logical, and demonstrates professional scientific writing	Writing is mostly clear and coherent with minor issues	Some sections remain unclear or poorly structured / Writing lacks clarity

Part 1: Human Feedback Summary (1 mark)

Criteria	**1 mark**	**0.5 / 0 marks**
Accuracy and specificity	Feedback is clearly summarised with specific points and thoughtful plans to address them	Feedback is vague, general, or missing

Part 2: Prompting Log (3 marks)

Criteria	**3 marks**	**2 marks**	**1 mark**	**0 marks**
Completion & appropriateness	All 3 prompt types + context used thoughtfully; well documented and meaningfully applied. Appendix provided	2 prompt types used well; some evidence of application. One prompt used poorly. Appendix may be missing.	1 prompt used appropriately or others poorly applied/lacking documentation	Prompts not used or poorly documented
Evidence of engagement	Demonstrates understanding of how prompt type influenced revision choices and quality	Some reflection on AI use; parts superficial	Minimal or unclear use	No engagement or use of AI shown

Part 3: Reflection Log (8 marks)

	Excellent (2)	**Good (1)**	**Needs Improvement (0)**
Comparison of Feedback	Insightfully compares AI and human feedback with examples	General comparison but lacks depth	No meaningful comparison or describes only one
Effectiveness of Prompting Levels	Thoughtfully discusses prompt types with justification and examples	Identifies preference but lacks detail	Generic or unrelated response
Impact on Writing Approach	Clearly articulates how AI influenced writing practice	Mentions influence with little insight	Very vague or no reflection
Limitations and Advantages of AI	Identifies both pros and cons with critical thought. Provides discussion of ethical AI use with an example.	Lists some points with minimal depth. Superficial discussion of ethical AI use without specific examples.	Vague or does not address the question. Does not include discussion of unethical AI use.

Final mark breakdown:

Component	Maximum Marks	Marks Achieved	Comments
Final Report with tracked changes, evidence of revision.	3		
Part 1: feedback summary	1		
Part 2: prompting log	3		
Part 3: reflection	8		
Total	**15**
