GenAI Assessment Risk Matrix

TYPE

PROJECT 3
Extended written responses or data-driven investigations where students synthesise sources or produce original analysis → *literature review, lab report, design project*

CREATIVE 2
Outputs requiring verbal communication, visual design, or creative interpretation → *oral presentation, video submission, poster, or artwork*

QUIZ/EXAM 1
Structured assessments testing recall, problem-solving, or application under timed or invigilated conditions → *final/midsession quizzes*

DELIVERY

ONLINE 3
Fully online submission or completion with no invigilation, enabling unrestricted access to generative AI tools

HYBRID 2
Online submission or digital exam with some monitoring, or assessment with a mixed mode of submission

IN PERSON 1
Conducted on campus without digital tools and/or under invigilated conditions, limiting AI use

AUTHENTIC

NOTHING 0
Applies to any student, no personalisation

PERSONAL -1
Unique aspect that cannot be easily generated/analysed with AI → *shared data or case study, experiment, personalised dataset, placement or fieldwork*

BODY OF WORK -2
Unique progression of student's learning observed frequently during creation

GUIDANCE

POLICY 0
Institutional AI policy in subject outline

GUIDELINE -1
Explicit task-level guidance provided

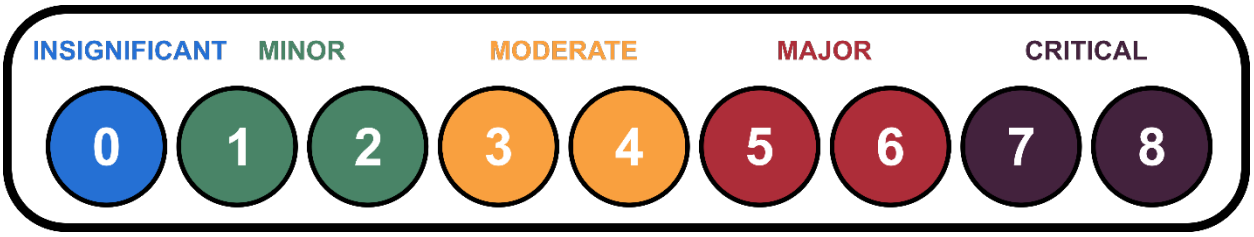
EDUCATION -2
Explicit discussion, examples, or resources educating students about appropriate AI use

× weighting

Risk Matrix Scoring

Use the GenAI Risk Matrix to evaluate your assessment by adding the dimension scores and multiplying the total by the assessment weighting:

Identify the Risk Rating:



Mitigation Strategies

If risk score is moderate, major or critical you can consider ways in which you could lower the risk score (see below for a range of ideas) and assess any potential changes by recalculating risk.

- *Include explicit details of GenAI use in your assessment guidelines.*
- *Add AI related referencing requirements to your assessment guidelines and consider increasing marks for referencing*
- *Use a GenAI declaration coversheet for your assessment*
- *Consider reducing assessment weighting if high risk*
- *Redistribute weighting of various assessment components based on GenAI integrity if multiple parts*
- Add some GenAI education in the form of 101 guidelines around its ethical and acceptable use for an assessment/the subject – include some discussion or an activity
- Scaffold the assessment with an in-class component
- Add personalization with unique data sets

- *Consider assessment of process rather than end product and incorporate process evidence (drafts, logs, reasoning, prompts) in submission*
- *Incorporate small authenticity checkpoints (vivas, in class quiz, oral defence)*
- *Include AI-integrated assessment to develop relevant workplace skills*

Feedback on the Risk Matrix

We'd love to hear your feedback! Feel free to share any thoughts on using the matrix, e.g. anything that was unclear, challenging, or missing by reply email.
