Teaching Evaluation Report - Lecturer - BIOL340 Cell and Molecular Biology, Autumn 2025, Doctor Nikolas Johnston

Project Title: **Autumn 2025 - Subject and Lecturer Evaluations**

Subject Enrolments: **168**
Responses Received: **33**
Response Rate: **19.64%**

Report Comments

This report is designed primarily for Teachers and provides:

- TEBS response rate and basic respondent demographics
- Overall evaluation ratings and ratings for each question
- Free-text comments – providing valuable information on aspects important to students and suggestions for improvements.

If you have any questions about this report, contact uow-evaluations@uow.edu.au.

Free Text Comments

Please note that all student comments have undergone AI-driven analysis to identify any inappropriate feedback received. While we hope that the majority of feedback is constructive and valuable, there is still a possibility of inappropriate comments being present. Should you encounter any inappropriate feedback, please report it to uow-evaluations@uow.edu.au. It is important for students to understand that any inappropriate feedback will not be tolerated. In the first instance such comments will be redacted and the student issued a warning. Repeated or serious instances will be directed to the Integrity Division for investigation under the Student Conduct Rules.

Interpreting the data

- Teacher Evaluation Reports are generated only when six or more students complete the survey. However, the results for subjects with fewer than six respondents are included in the aggregate UOW, Faculty and School reports.
- Response rates of less than 10% should be interpreted with caution.
- A numeric value is assigned to each response. These are used to calculate the average (mean) for each question. Values assigned are:
    - Strongly Agree (6)
    - Agree (5)
    - Mildly Agree (4)
    - Mildly Disagree (3)
    - Disagree (2)
    - Strongly Disagree (1)
    - Unable to Judge (not counted)
- **An overall Teacher Evaluation mean is calculated on the 10 core questions only** - Any additional questions included in the survey are not counted towards the mean.
- Mean scores can hide extremes in responses, as such, you are encouraged to also utilise response distribution and percentage agreeable metrics.

About the TEBS Survey

The TEBS Survey has been designed as a tool to assist teachers to evaluate and reflect on their teaching within a subject.in order to assess their impact on teaching and learning.
These reports are also used as formal teaching evidence in UOW Academic Probation and Promotion applications, included in OCTAL documentation and supporting documentation during annual career development meetings.

See the Evaluation of Learning and Teaching website for further information.

Please see over page for qualitative comments. If you wish to utilise these results in your promotion/probation application, please download and extract this page. You are not required to submit qualitative responses in your promotion/probation application.

Responses will appear here regardless of the number of responses received. Please note that if you receive a small number of comments these may not be representative of your student cohort.

11. What were the best aspects of the Lecturer's teaching and what aspects of teaching would you suggest this Lecturer could improve?

Comments
Very enthusiastic about the content and the computer stuff. It helps with the morale and energy of the students. We just aren't kind of people sorry. There was a pretty large consensus around the lack of relevance and extreme difficulty of the coding aspects of the course. I don't think thats necessarily your fault but it definitely was not something that aided our knowledge of biology.
Nik's lectures were easy to understand and engaging. I really liked the incorporation of practice questions to help test our knowledge.
– No improvements
I thought Nikolas was very engaging in his lectures and I really enjoyed learning about his field of research.
good teaching overall, can improve explaining things
This whole subject felt very poorly run and organised. There was very poor communication on Moodle and via emails even close to assessment due dates. It didn't feel like this subject or its students were a priority at all.
Their lectures were very engaging, very clear information presented with lots of visuals to match the written information provided. Also employed a lot of audience participation and example exam questions, which made the lectures even more engaging and helped me pinpoint which pieces of information I was less sure on to go and review. Could improve by responding more quickly on the student forum on Moodle and responding to emails that had queries about assessment tasks and requesting for feedback. Also have greater outline of assessments so that individuals are less confused, and less conflicting information about assessments, and faster response times to respond to queries about assessments, such as whether the scientific report was to be formatted in APA7 or Harvard.
Incredible, very passionate
Nik's teaching was clear and concise, focusing on the core components related to subject. However, I believe that some aspects of his teaching were oversimplified and did not effectively address nuances that emerged in the exams – a potential improvement for how he structures his lectures. It would also be worth considering integrating more clinical/practical applications of the content to make it more dynamic.
Very good and enjoyed the content he taught, ran the pabs well
engaging, always found time to walk around and assists with any questions/queries
very knowledgeable, passionate and helpful in wet and dry labs
Excellent lecturer, nothing to improve.
Nik is good, good be better on the email replying. but otherwise he is Nice and obvi knows lots
Nikolas is very clearly passionate and knowledgeable about the subject, and proves this continuously throughout both the lectures and practicals he teaches. I really enjoyed his use of mentimeter and other activities throughout the lectures he taught as they helped maintain engagement and focus. I also enjoy his humour. There are no improvements that I can suggest.
I like the energy you bring to lectures and classes, you can tell that it is something your passionate about and that you enjoy teaching, not just the science alone. This personally makes a big difference to my experience and the way i engage with a class

Instance Breakdown

Please note that details under each instances will only appear where there were 6 or more respondents for the instance.

Reliability Assessment Score (RAS)

The RAS gives you an indication of the reliability of the data reflecting accurately the views of the student cohort. Results will be classified as insufficient, sufficient or good. Where scores are considered insufficient we encourage you to review the statistical information with caution and focus instead on the free text comments.

With 33 responses from a survey population of 168, the data presented in this report is considered to be **Sufficient**
Number of responses needed to be considered sufficient: 18
Number of responses needed to be considered good: 54
